

**Now when you go to any signup page you will find this option**

**Load From Local Device**

And  
In Liturgies screens you will find also

**Save To Local Device**

Please notice that this feature lets you save your data as cookies, not on our database so that you can load it next time you register for any service. This feature is only beneficial if you are constantly registering from same device and same browser, then you will be able to load your data. Therefore if you try to load the data from any new device or even same device but different browser, it will not work, unless you save it again once with the new device and browser.

*Technical clarification for IT only: the system is using browser localStorage not cookies*

**Comparison**

Works server side	Works client side
Asks you to enter prior request number and phone and zip code (in some churches allows you to enter birthdate instead or request no)	Just one click gets your profile that you saved and no need to remember prior request number
Data coming from prior reservations	Data coming from your local browser and machine which you have saved before
Not available on Vespers screens in some churches and in other churches this feature is not available also in Liturgies registration	Available in All Churches , please note that the Save option is only in Liturgies page so you can save your profile once from any Liturgies Page ( no need to make actual booking) then you can load your profile from any screen in the system Liturgies,Vespers,Kiahk,Events...
You can use this from any browser or device	You will need to use the same browser and device you saved the data to , but you can always save your profile to multiple browsers and devices
Pulls the data of the request given from the server-database In case of date of birth it pulls only the latest liturgy booking data and fills the screen with it	You can save up to 3 profiles in the three available locations (M1,M2,M3) in this version so far.

In both cases it is expected that you will review carefully the filled data and remove who is not coming and add who is missing before you sign up (don't just click M1 and signup, please review what is filled)

You can consider both tools are just helpers to write for you in the page quickly (like Auto-Fill)
